

# RSAGPS

The ultimate platform for  
GPS tracking and IoT

FLEET MANAGEMENT

TEMPERATURE CONTROL

DRIVER SCORING

VIDEO TELEMATICS

**Trusted:** 8 years on the international market

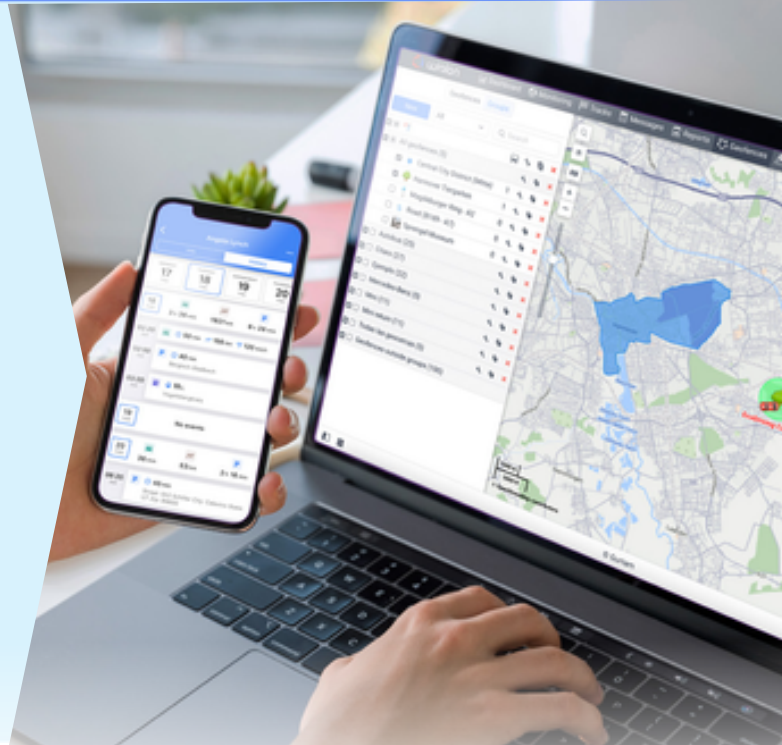

**Universal:** seamlessly works with 3,100+  
GPS device models

**Flexible:** delivered as a cloud- and server-  
based solution where you can configure every  
parameter

**Supportive:** 24/7 multilingual technical  
assistance to 400+ partners globally

Large-scale: 3400 vehicles tracked  
in 50+ countries

**Extra:** industry-specific functionality

## Fleet management

The platform allows controlling various fleet aspects from overall performance to operation costs.

- **Real-time tracking and analytics.** Enhance fleet performance, keep the cargo safe at all times, make employees drive responsibly, and save money on maintenance.
- **Fuel consumption control.** Monitor fuel consumption in all types of vehicles, diesel generators, and filling stations.
- **Maintenance control.** Reduce operation costs, avoid critical breakdowns, and minimize the time spent at the service station.

## Temperature control

RSAGPS it becomes possible to prevent product waste and ensure the cold chain by controlling the temperature inside the refrigerator trucks and stationary cooling chambers.

- **Effortlessly configure temperature parameters** and track them in real time.
- **Collect and analyze temperature data** from trackers and sensors.
- **Get alerts** in case of temperature deviations or when operators forget to close the refrigerator door properly.
- **Take advantage of comprehensive reports and graphs** to follow temperature changes within specified periods.
- **Plan maintenance** of refrigerators in advance.

## Driver scoring

**RSAGPS** provides a customizable driving quality assessment based on violation criteria. Improve fleet and staff safety, reduce fuel costs, and enhance cargo integrity and preservation.

- **Detailed presentation of driving quality** for each vehicle in a user-friendly visual format.
- **Access to the details on violations** with tracks and event markers on the map.
- **Driving quality evaluation** based on various criteria and driver ranking based on their overall performance.
- **Violation criteria** presets for vehicles, buses, and trucks for quick configuration.

## Video telematics

**RSAGPS** brings together GPS tracking and video telematics in one platform to reduce accident rates, and improve safety on the road.

- **Use video playback and livestream** to capture, observe and analyze any road events to make informed decisions.
- **View videos from reports or request previously saved videos:** accurate, unbiased footage enables precise incident analysis.
- **Easily configure** devices for a quick start.
- **Work with video software compatible with various MDVRs** and available in web and mobile app versions.
